

## Enzyme Therapy

- **Helps with digestion of dead tumor mass**
- **Taken away from meals, fibrinolytic enzymes help break down the cellular covering that hides a cancer cell from the immune system.**
- **Dr John Beard in Scotland The Unitarian Trophoblastic Theory of cancer in 1902. Dr Beard said that pancreatic enzymes were the main defense against cancer.**
- **Further developed by Donald Kelly DDS as part of a nutritional treatment of cancer. He developed a metabolic supplementation support program.**

**There were a number of pancreatic cancer survivors. One woman had been diagnosed by biopsy in 1982 by Mayo Clinic as pancreatic cancer with mets to the liver. She later contacted Gonzales 27 years later after her diagnosis.**

- **Nicholas Gonzalez MD currently in NY. Originally sent down to expose Kelly but eventually became a believer in the Kelly method. He is now practicing with a treatment protocol based on Kelly's experiences.**

**Gonzales is on record for saying that oncologists "...have to be an idiot not to be aware that for most of the cancers chemo isn't doing anything. It's in all the journals. It's not like it's a secret."**

*from Knockout by S Somers p96*

**This is from an aware MD who knows what a fallacy chemotherapy is and how people are led, like sheep to the slaughter, through the direction of their oncologist.**
