

# **Surgery**

- **Curative offered if primary tumor only.**
- **Almost never curative as by 2mm there are likely metastases.**
- **Debulking adjunctive with other therapies.**
- **Post protocol debulking of tumor with BioImmune protocol offered here should be considered.**
- **When a tumor (for example a 20 lb lymphoma) undergoes necrosis (dies), the body sometimes cannot handle the toxic waste left behind. It is then imperative to have a surgical consult to assess removal of the necrotic debris.**
